Memorandum Number 051-79

Chief, Supply Division

[REDACTED]

Report on Energy Management

REF : [REDACTED] dtd 18 Jul 1978, Subject: Annual Report  
on Energy Management

1. [REDACTED] continues to meet its utilization program as reflected in the attachment to the reference. We do not at present have targets established for this fiscal year primarily because of the fact that [REDACTED] and no goal for utilization of energy has been developed. [REDACTED]

2. Recently we have received directions [REDACTED] to take two actions, both of which have some bearing on our energy utilization [REDACTED] (See attached) First, we are directed to arrange all possible utilization of natural gas as opposed to diesel oil for [REDACTED] heating. We are now in the process of making this switchover, and of course our utilization of diesel fuel will drop dramatically and our use of the much cheaper natural gas available here will increase. Secondly, the [REDACTED] message directs that we reduce our gasoline consumption by 5%. I propose to do this by means of a rationing program based on allocation of a specific number of gallons to individual vehicles. When any vehicle has received its monthly allocation of gasoline, no more will be available for use in that vehicle for the balance of that particular month. This will present some problems, but nothing we can't live with. As you are aware we are now just about at the lowest possible point of vehicle utilization [REDACTED] As an example, [REDACTED] on any given day drives vehicles assigned to [REDACTED]
